Bio Systems

Volume contents

Volume 43 (1997)

Dynamics of two-component biochemical systems in interacting cells; Synchronization and desynchronization of oscillations and multiple steady states
J. Wolf, R. Heinrich (Germany) 1–24
Information processing and symmetry-breaking in memory evolutive systems
A.C. Ehresmann, J.-P. Vanbremeersch (France) 25–40
Constancy, uniformity and symmetry of living systems: the computational functions of morphological invariance
A.C. Elitzur (Israel) 41–53
Is symmetry informative?
J.E. Gray, A. Vogt (USA) 55–61
A theoretical integration of Cambrian explosion and post-Permian quiescence
Y. Takahara, N. Ono (Japan) 63–68

Meeting report
Computer science and biology—the German Conference on Bioinformatics (GCB'96)
R. Hofestaedt 69–71

Ant colonies for the travelling salesman problem
M. Dorigo, L.M. Gambardella (Belgium, Switzerland) 73–81
A quantum-theoretical approach to the phenomenon of directed mutations in bacteria (hypothesis)
V.V. Ogryzko (USA). 83–95
Generation of fractals from incursive automata, digital diffusion and wave equation systems
D.M. Dubois (Belgium) 97–114
The atomic basis of biological symmetry and periodicity
A. Lima-de-Faria (Sweden) 115–135
Reinforcement of genetic coherence: a single-locus model
W. Steiner, H.-R. Gregorius (Germany). 137–144

Cold and post-traumatic pain: modeling of the peripheral nerve message
L. de Medinaceli, J.-c. Hurpeau, M. Merle, H. Begorre (USA, France) 145–167
Context-free evolutionary grammars and the structural language of nucleic acids
J. Dassow, V. Mitrana, A. Salomaa (Germany, Romania, Finland) 169–177

Graph grammars as an analytical tool in physics and biology
D. Gernert (Germany) 179–187
Simulation of human sensory performance
W. Wong, K.H. Norwich (Japan, Canada) 189–197
Non-random ionic-charge distribution responsible for the structural stability and molecular recognition of proteins
K. Soda, K. Kakuyama, Y. Miki (Japan) 199–204

Author index 205
Subject index 207–208
Volume contents 209–210
